E-Mail: fullingim@tamct.edu
Course: AVSC 4388
Schedule: June 4 – July 27, 2018
Class Time: To be determined
Office Hours: Summer 2018:
   Monday, Tuesday, Wednesday and Thursday: Virtual
I. Overview

The Aviation Special Problems course “Research of Cutting Edge Aircraft” directs students to research how commercial and military aviation has developed and changed in recent years, particularly in commercial operations. This project will cover general aviation operations from the perspective of the student while focusing specifically on pivotal aircraft that made a substantial difference in US aviation history.

Prerequisites: Commercial Pilot Certificate, minimum GPA of 2.5 and senior classification.

II. Course Completion Standards

The course will be considered successfully completed when the student has completed a written report summarizing the findings of this study. This will require visits to various aviation museums.

III. Schedule

The student will determine their own schedule, as this will be researched away from the TAMUCT campus.

IV. Grade Computation

Grades will be calculated on the performance of the student on the content of the written report and oral presentation, which will be determined by the instructor. Letter grades will be determined at the end of the course.
